Work Experience
IDEMIA
Software Engineer II
Remote | 01/2023 - Present
- Collaborated with 2 other engineers to create new user interfaces and over 5000 lines of Java backend workflow logic to upgrade the current system for Nassau County Police Department.
- Created a BeanShell script to automate the deletion of over 1000 outdated cases in the FBI database, saving hundreds of engineering hours.
- Developed a simulator using Java to mimic connection to New York State Division of Criminal Justice Services, improving testing capabilities.

Entech(Johnson & Johnson)
Software Engineer
Malvern, PA | 02/2022 - 12/2022
- Built an application leveraging ThingWorx and Microsoft Graph API to display employee direct reports and contact information, resulting in faster employee searches.
- Increased employee productivity by developing a data visualization page for a document approval app to organize and order documents based on time spent in waiting state.
- Created a web application that monitored user group growth trends by automating SQL database queries to run each day, allowing stakeholders to monitor growth progress.

Education
West Chester University of Pennsylvania
Bachelor's Degree in Computer Science
2021

Projects
Spotify Clone
- Created a clone of the Spotify web application using React, TypeScript, and Tailwind allowing users to create accounts, upload music, and listen to songs/playlists.

Library Website
- Designed and developed an e-commerce website utilizing React for an imaginary library service, users can browse and add books to their shopping cart

Skills
Java, JavaScript, HTML, CSS, React, TypeScript
